NOTICE!!!

CUSTOMER NOTIFICATION REGARDING CUSTOMER OWNED GAS LINES

IMPORTANT NOTICE TO CITY OF TALLAPOOSA CUSTOMERS

Federal Regulation 192.16 requires that we notify you to exercise diligence regarding underground or buried gas piping. Buried pipe may be subject to leakage and/or Corrosion (corrosion may occur on metallic pipe and could potentially be subject to hazards if not maintained).

Remember that any and all gas pipe downstream (house side) of the gas meter belongs to you, the gas consumer, and the gas consumer is responsible for maintenance and operation of this portion of the fuel line system. We do not own the gas line beyond the gas meter; therefore, we do not routinely maintain or locate fuel lines. Commercial plumbers and/or heating contractors may be contacted if and when gas fuel lines need attention.

Buried gas piping should be-----

- Periodically inspected for leaks:
- Periodically inspected for corrosion if piping is metallic:
- Repaired if any condition is discovered, or if the flow of should be shut off, and
- When excavation is performed or is about to be performed near the buried gas piping, the piping should be located and marked in advance, and any excavating performed near the pipe should be done by hand.

This is a **NOTICE** only. If you have questions or comments regarding this correspondence, please contact a gas system representative at our business office at: **770-574-2345**.

Thank you for allowing us to serve you.

I have received a copy of the notice regarding customer owned gas lines and a copy of the excess flow valve notice from the **CITY OF TALLAPOOSA, GEORGIA** this _____ day of _____, 20_____

EXCESS FLOW VALVE NOTICE

Excess Flow Valves (EFVs) are mechanical shut-off devices that can be installed in the natural gas pipe running to the gas meter at your property (“the service line”). An EFV is designed to shut off most of the flow of natural gas automatically if the service line breaks, for example, by an excavation accident. Stopping the flow of gas from a broken service line significantly reduces the risk of natural gas fire, explosion, personal injury and/or property damage.

You may request that **City of Tallapoosa** install an excess flow valve on the service line to your property.

If you notify us that you want an EFV we will contact you to discuss your specific situation and the cost of installation and maintenance. EFVs cannot be installed on some service lines due to high gas flow, low pressure or other factors. If you request an EFV, we will inform you if your service line cannot accommodate an EFV.

If an EFV can be installed on your service line and you choose to have this done, we will set up a mutually agreeable date when we will install an EFV on your service line.
